Configuring / Troubleshooting / Windows 7 Sometimes you see error messages with codes like Socket Error 11004 (the most common) when checking your.

Socket Error 11004 is a Windows Sockets (Winsock) error code. It generally indicates a problem with the network connection. This error code is returned by the WSAGetLastError function.

This error code is usually associated with network related issues. It can be caused by problems with the network card, the network adapter, or the Windows Sockets (Winsock) protocol.

To fix this error, you can try the following steps:

1. Check the network connection: Make sure that the network connection is functioning correctly. If you are using a wireless connection, make sure that the wireless network is enabled and that you are connected to the correct network.
2. Restart the computer: Sometimes restarting the computer can fix the problem.
3. Check the network settings: Make sure that the network settings are correct. You can check this by looking at the network adapter properties.
4. Update the network drivers: If the network drivers are out of date, they may be the cause of the error. You can update the network drivers by going to the device manager and updating the drivers.
5. Contact the network administrator: If you are not able to fix the problem, you may need to contact the network administrator for help.

Note: These steps are general suggestions and may not work in all cases. If the problem persists, you may need to seek professional help.
